Description

Basic information about the drug BenditDescription BenditOrder, delivery and payment Bendit

Bendit (Bendit) is a generic of the well-known drug against malignant tumors Treand. The active component of the drug is the substance bendamustine, which affects cells with hyperplastic nuclei. These are cells of tumors, lymph and bone marrow. The mechanism of action of the drug consists in the destruction of cellular RNA chains. As a result, malignant cells stop dividing, which helps to stop the growth of malignant tumors. The international name and spelling of the drug is Bendit.

Bendit: buy

You can buy Bendit in an online pharmacy by filling out an application and contacting our specialists.

The price of the drug Bendit

Bendit is a drug manufactured by the Indian company Natco. It is known that the cost of generics is much cheaper than that of original drugs, but this does not affect the quality and effectiveness of treatment. Due to the emergence of generics on the pharmaceutical market and the ability to work directly with suppliers and manufacturers, our online pharmacy always has the amount of drugs required for a course of treatment.

Bendit (bendamustine): reviews

A few weeks after the regular administration of the drug, patients notice a persistent positive effect. Doctors recommend the introduction of the drug Bendit according to the strict removal of the application.

This is a solution for intravenous use. The average duration of its infusion should be at least half an hour. It is permissible to use from six to eight cycles of drug administration in a row - depending on the type and course of the disease.

Description of the drug Bendit

The solution is placed in 100 mg vials.

Bendit: indications for use

Chronic lymphocytic leukemia, non-Hodgkin's lymphoma, multiple myelomas, as well as malignant lymphomas.

Bendit: contraindications

Bendamustine should not be prescribed for individual intolerance to the drug, herpes zoster, exhaustion, serious liver and kidney disease. The drug is not prescribed to pregnant women, and breastfeeding should be discontinued while taking it. Also, Bendit is contraindicated in hypoplastic forms of anemia and terminal cancer.
