Where to buy Tenvir EM?

Tenvir EM was developed by an Indian Pharmaceutical Factory to treat patients suffering from Human Immunodeficiency Virus. The drug is also used to treat hepatitis and is used to reduce the risk of infecting a partner during unprotected intercourse. A feature of the drug Tenvir EM is that therapy is also acceptable for minors. It is known that it is impossible to completely heal from HIV infection and hepatitis, but thanks to this drug, you will be able to improve and strengthen your immunity. The medication is available to order on our website. But do not forget that self-medication is unacceptable. You should definitely visit a consultation with your doctor.

Prices for the drug Tenvir em

Tenvir em is a complex antiviral drug that has been launched with two active ingredients - tenofovir 300 mg and emtricitabine 200 mg. In America, pharmaceutical companies produce medicines with a similar composition called Truvada Gilead. Very few can afford the original drug due to the fact that it is very expensive. And the drug Tenvir em is quite cheap and is available today for everyone who needs such therapy. All medicines that are in our catalog are sold at prices from the manufacturer, because we cooperate with suppliers.

Active substances Tenofovir 300 mg + Emtricitabine 200 mg

As soon as the active substances are thrown into the patient's body, this will start some metabolic processes. Each component is responsible for its own function. Tenofovir does not allow the virus to continue multiplying, because the viral cells can no longer be reinforced. An hour later, tenofovir and emtricitabine begin to work actively and this becomes immediately noticeable. Active substances very rarely carry negative reactions. Only occasionally did a small percentage of patients experience a range of side effects. But it is worth noting that they pass very quickly. If you are faced with the fact that your condition is not improving, be sure to contact your doctor to avoid negative consequences.

Description

Each carton pack of Tenvir EM contains 30 solid tablets. One tablet contains 300 mg of tenofovir and 200 mg of emtricitabine and many other additional substances to facilitate better absorption of the active ingredients.
