Where can you buy Udikast?

Today, one of the most famous Indian pharmaceutical companies has created the modern drug Udikast. Its distinguishing feature is that the medication is very well tolerated by patients. It is based on ursodeoxy acid. It is able to dissolve cholesterol in patients' bodies. In gastroenterology, Udikast is prescribed when a patient has gastrointestinal dysfunction. You will be able to make a profitable order at the Pharmacy, because all drugs are brought to us from suppliers, which eliminates the need to overpay for their cost. Our site has a lot of positive reviews from patients undergoing treatment who buy medicines from us. Before taking Udikast, consult your doctor who monitors your medical history and knows the characteristics of your body.

Prices for the drug Udikast

The active ingredient in Udikast is Ursodeoxycholic acid. It effectively and quickly dissolves cholesterol gallstones. In addition, Udikast itself can treat biliary cirrhosis and other diseases in the liver of patients. The medicinal substance significantly prolongs the patient's life. Patients who

have no symptoms - up to 16 years, patients with symptoms - up to 8 years. In addition, the effectiveness of Udikast is at the same level as that of its original drug. Only the cost of a generic drug is much less, which makes it truly affordable for patients with different financial income.

Active substance Ursodeoxycholic acid

Ursodeoxycholic acid is very effective in dissolving cholesterol gallstones in the body of those being treated. In addition, and importantly, the active substance is safe for every patient undergoing treatment with it. A small percentage of patients noted temporary side reactions: defecation disorder, severe nausea, dermatitis and other manifestations of allergy, changes in ALT / AST parameters.

Description of Udikast

When you buy the drug Udikast, pay attention to the following factors: the medication must be found exclusively in the original packaging, on which the company logo will be; both the expiration date and the production date must be indicated. One hard tablet contains 300 mg of ursodeoxycholic acid.

Indications of ursodeoxycholic acid

As soon as the patient undergoes a detailed examination, the attending physician may prescribe Udikast for people who have the following indicators: cholesterol stones in the gallbladder; acute viral hepatitis (B / C); non-alcoholic steatohepatitis; toxic, alcoholic, medicinal liver damage; biliary dyskinesia; chronic opisthorchiasis.

Contraindications

The drug Udikast is contraindicated during: hypersensitivity reactions, exacerbated inflammation of the gastrointestinal tract and intestines, calcification of gallstones, decompensated cirrhosis, severe dysfunction of the liver, kidneys, pancreas.
